

## Day 13

08/04/2020

It's day 13!!!!!! So, today Mr. Fitz and Mr. Mac are with us.

This morning, they set quite a hard task for us, which took us all day! They wanted us to re-create a £25,000 pound piece of artwork. WOAH!!

We had to make: Spin art.

By using: batteries, a box and crocodile wires so we could end up with our very own artwork.

### The original piece

The expensive piece of art was originally created by a British artist called Damien Hirst. He first began to explore the artistry of spinning art when he was nine years old and over many years people have paid up to £25,000 pounds for his artwork. He is mostly known for his displays of dead animals and his work on spinning art. When he does the spinning art, he creates animals and shapes to make his work more effective.

### Our turn

We all had a go at making something like Damien did.

At the beginning I was soooooooo confused.

Mr. Fitz was saying you needed to connect a motor to a propeller and I was like "WHAT EVEN IS A MOTOR!?" However, after some time of thinking I was starting to get the hang of what he was saying... that is until he began saying loads of words to me that I didn't even understand. The only thing that I could think of was, "WHAT?" After some time, I was ok and rolling like a train but I have to admit it was VERY difficult.

Isobella, Rhys and I tried very hard but eventually we decided to not go ahead because 1. I had to write my blog and 2. It just wasn't working. At least we gave it a go!

But, we do have some super spinner makers. Alex and Ethan were the pair who successfully created a spinning art. Oh, and not to forget Mr. Fitz of course, who was a master at making them. Alex and Ethan, after they had finished making their circuit, put the paint on and made it look like a professional art piece!

CONGRATULATIONS, to Alex and Ethan for successfully creating some spinny art.

Who knows they could be the next Damien Hirst!
